

transformative workplaces

The challenge

People retention, skill, talent and engagement, wellbeing, productivity, sustainability; deciding how much workspace you need and how to use it are rapidly becoming major complex challenges for leaders around the world.

How to balance cost pressure and stakeholder demands with reimagining, redesigning and recreating sustainable workplaces requires critical thinking. Creating environments in which your people enjoy enhanced levels of experience, better engagement and workplace design to enable networking, collaboration and socialising is an indication of an organisation's future intent. Workplaces now need to be desirable destinations providing users with choice and flexible options of when and where they work. Are you ready?

EMCOR UK can help you to transform your workplaces and redefine the world at work

- Developing a portfolio of space solutions, take a fresh look at space and how much you need of it
- Using evidence-based analytics we support customers to change, inspire, adapt and sustain transformative workplace solutions
- Deploying our total engagement process we identify what users think and feel about the workplaces they use, and the services they receive using data and analytics to create a strategy aligned to your business objectives, we call this workplace evolution
- Capturing data through surveys, sensors and monitoring tools, we then use AI to convert this into insight, turning insight into knowledge and knowledge into action
- Utilising employee experience analysis to turn information into strategic insight optimising space utilisation, user experience and FM service models
- Optimising building performance using environmental monitoring sensors to measure temperature, light, humidity, CO2 and noise levels using cutting edge technology to reveal actionable insights, improving experience and reducing total expenditure
- Building next generation cultures through SMART workplace technology we offer data convergence solutions and architecture. By connecting systems and subsystems into one core data platform we create intuitive, sensitive and adaptable ecosystems

We are seeing an unprecedented demand for new workplaces that support the challenge to deliver great work, which promote wellbeing and contributes to more productive outcomes in the context of a flexible work life balance
